ACCESSION NR: AP4015895

z/0039/64/025/001/0002/0010

AUTHOR: Dokoupil, Stanislav (Engineer, Candidate of sciences)

TITLE: Asymmetric sideband transmission

SOURCE: Slaboproudny obzor, v. 25, no. 1, 1964, 2-10

TOPIC TAGS: transmission, asymmetric sideband system, amplitude modulation, single-sideband transmission

ABSTRACT: Despite several works on specific problems of asymmetric sideband transmission, a derivation of its basic relations has been lacking in the Czech literature and had to be sought in sources not readily available (monographs of S. Goldman, and E. C. Cherry; and a 1959 candidate dissertation at CVUT, Prague, by Z. Mack). To fill this gap, the author reviews the derivation of the known formulas for the in-phase and quadrature components of AM signals after asymmetric transmission. It is claimed that symbolic representation of signals makes the derivation more concise and clearer than other derivations to date. In the second part of the article, the amplitude and phase characteristics of the transfer function are divided into even and odd components, with the aid of which the

ACCESSION NR: AP4015895

expressions for in-phase and quadrature analogies are modified to facilitate a quick estimate of the nature of the distortion. Various combinations of amplitude and phase characteristics are considered, to illustrate the contribution of the individual components to asymmetric sideband transmission. Orig. art. has 55 formulas and 11 figures.

TITLE: [A device for measuring changes in rock pressures by radio] CZ Pat. No. PV
2562-62, Class 21g

QM

SOURCE: Vynalezy, no. 11, 1965, 14

TOPIC TAGS: measuring instrument, transmitter, receiver, pressure

ABSTRACT: A device for the measurement by radio of changes in rock pressures is described which features a transmitting device positioned in a mine opening or a bore hole and a field meter likewise positioned in a mine opening or a bore hole or several such field meters so positioned. There is an auxiliary field meter also positioned in a standard, correlated place in the space to be investigated with a level discriminator for leading off signals indicating the deviations of the value of field intensity in the standard place or position from the desired and controlled level, and a transmitter output regulator. A transmission channel transmits the deviation signal from the discriminator to the regulator which controls the transmitter output in such a way that in the steady state the deviation equals zero.

14

SOURCE: Vynalezy, no. 3, 1966, 14-15

TOPIC TAGS: electronic circuit, radiation detecting device, electrode, resistor, capacitor

ABSTRACT: A connection circuit for a radiation detector-probe has been introduced, designed primarily for cable-feeding into a high working impedance. The output electrode of the detector-probe is coupled to an integrating capacitor through a by-pass capacitor whose capacity matches that of the output electrode. An integrating resistor which is also connected to the capacitor feeds a current amplifier whose input impedance is substantially lower than the integrating resistance and, therefore, the time constant of the response decay is predominantly

TITLE: A detector probe of radioactive radiation. CZ Pat. No. PV 927-64,
Class 21

SOURCE: Vynalezy, no. 3, 1966, 15

TOPIC TAGS: detection equipment, radioactivity measurement, photomultiplier

ABSTRACT: A radiation detector-probe has been introduced which incorporates a photomultiplier whose anode or output dynode is connected to an integrating capacitor by a feed resistor. The resistor feeds a current amplifier whose input impedance is substantially lower than the feed resistance; therefore, the time constant of the response decay is predominantly determined by the integrating capacity and the feed resistance. Four points of the patent are enumerated.

BULG.

Morphological and histochemical study of lipides in yolk globules, A. Khadzhilov, O. Boyadzhiev, V. Dokov,

and E. Chakarov. Compt. rend. acad. bulgare sci. 7, No. 1, 49-51(1954).—The distribution of lipides in the yolk globules of nonincubated hen eggs was studied by fixation of egg films with HCHO or $K_2Cr_2O_7$ and subsequent staining. Yolk globules stained intensely with Sudan III or Nile blue in the periphery, but only slightly in the central part which showed a typical granulation and in some cases a vividly sudanophilous bubble. The central part was counter-stained with hematoxylin, methylene blue, or acid fuchsin, after which the sudanophilous bubble appeared as a nucleus. Treatment with lipide solvents removed the Sudan-staining material. The results are taken as evidence for a morphological organization of the lipide component of the yolk and yolk globules. J. A. Bain.

Title : Amitotic Cell Division in Embryonic Liver Explanted on Allantoic Shell of Chicken Embryo.

Orig Pub : Dokl. Bolgar. AN, 1955, 7, No 2, 61-63

Abst : Liver of 3 and 8-day chick embryos was explanted on the allantois of a 3-day chick embryo. In the author's opinion, this created conditions that were close to normal. Specimens, prepared by the Bil'shovskiy technique, revealed only amitotic divisions. The author believes that amitosis is the normal type of cell division in liver, both in embryos and in adult organisms.

and in the Intestines of Sheep.

Orig Pub: Izv. In-ta eksperim. vet. med. B"lg. AN, 1956,
No 5, 17-29.

Abstract: Twelve embryos 20 to 150 days old, one newly
born lamb, 5 suckling lambs, 10 lambs aged 4
to 6 months and 12 adult sheep, were studied.
It was found that the glands in the abomasum
wall and in the intestines are developed com-
pletely only after the end of the lactation
period. In newly born lambs these glands are
in a rudimentary state.

Bratislava, Biologia, Vol 18, No 10, 1963, pp 781 - 786

Abstract: The described disease occurs in parts of Southern Bulgaria and was described in 2 previous articles by the authors. The disease was observed on Rana ridibunda, R. dalmatina and Bombina variegata. It is transferred from one frog to another by leeches Batracobdella algira. The organism that causes the disease has a granulomatic character.

AUTHOR: Dokshevich, A. I.

TITLE: Some inequalities in the problem of a heavy rigid body rotating about a fixed point

SOURCE: AN UzSSR. Izv. Seriya fiziko-matem. nauk, no. 2, 1963, 16-23

TOPIC TAGS: mechanics, inequalities, rotation, classical integrals

ABSTRACT: In the study of the desired functions in the problem given in the title, inequalities connecting these functions provide essential aid. The author derives inequalities defining the range of the characteristic variables for this problem on the basis of classical integrals. Orig. art. has: 49 formulas and 3 figures.

AUTHOR: Dokshevich, A. I.

ORG: Institute of Mechanics and Computer Center, Academy of Sciences, Uzbek SSR
 (Institut mekhaniki i vychislitel'nyy tsentr Akademii nauk UzSSR)

TITLE: A particular solution of the problem of the revolution of a heavy solid about a fixed point

SOURCE: AN SSSR. Doklady, v. 167, no. 6, 1966, 1251-1252

TOPIC TAGS: motion equation, integral equation, parameter

ABSTRACT: The equations of motion of a heavy solid about a fixed point are examined:

$$\begin{aligned} \dot{x} &= (a_2 - a_1)yz + (b_2y - b_1z)x, \\ \dot{y} &= (a - a_2)zx + (b_1y + b_2z)z - b_1x^2 - \gamma_3, \\ \dot{z} &= (a_1 - a)xy - (b_1y + b_2z)y + b_1x^2 + \gamma_3, \\ \dot{\gamma}_1 &= \gamma_2\omega_3 - \gamma_3\omega_2, \quad \dot{\gamma}_2 = \gamma_3\omega_1 - \gamma_1\omega_3, \quad \dot{\gamma}_3 = \gamma_1\omega_2 - \gamma_2\omega_1, \end{aligned}$$

where

$$\omega_1 = ax + b_1y + b_2z, \quad \omega_2 = a_1y + b_1x, \quad \omega_3 = a_2z + b_2x.$$

The center of gravity of the body is on the perpendicular to the circular cross section

UDC: 531.38

Card 1/2

L 36094-66

ACC NR: AP6013892

of the ellipsoid of gyration: $a_2 - a_1 = 0, b_2 = 0.$

Assuming that the initial value of x differs from zero and $b_1 \neq 0$, the equations and their integrals are

$$\begin{aligned} dx/d\tau &= -zx, \\ dy/d\tau &= (a_0 - b_0)zx + zy - \gamma, \\ dz/d\tau &= (b_0 - a_0)xy - y^2 + z^2 + \beta, \\ da/d\tau &= -\gamma(b_0y + x) + b_0\beta z, \\ d\beta/d\tau &= \gamma(a_0x + y) - b_0az, \\ d\gamma/d\tau &= \alpha(b_0y + x) - \beta(a_0x + y), \end{aligned}$$

whose particular solution

$$\begin{aligned} y &= y_1x + y_2x^{-1}, \quad z^2 = r_1x^2 + r_2x^{-2} + r_0, \\ \alpha &= a_0 + a_1x^2, \quad \beta = \beta_0 + \beta_1x^2, \quad \gamma = \gamma_0xz. \end{aligned}$$

The time dependence of the variables is determined, and the constants are expressed in terms of a_0, b_0 . This paper was presented by Academician P. Ya. Kochina on 19 July 1965. Orig. art. has: 9 formulas.

in 1957 and 1958 by the All-Union Scientific Research Institute for Shale Processing are summarized in this collection. Organic components of oil shale from various regions, their chemical composition, and physical and chemical properties are reviewed, along with the production of gas from oil shale. Also discussed are: semicoking of oil shale, analysis of oil shale and shungite, fractionation of tar obtained in oil shale semicoking, conversion of fan and the equipment used, hydrogenation of diesel fuel produced from oil shale, extraction of phenol, and purification of tarry waters by anionite and formaldehyde. Most articles are accompanied by references. In addition, the book contains an annotated bibliography of 126 Soviet and non-Soviet works on the processing of oil shales.
